## Configuration Best Practices

### Email Reminders

#### Why are email reminders important?

- They help prompt users and approvers to perform an action
- Triggered when a user breaks a rule you've set
- Example: Approval email reminders

**Standard Platform** – Automatically configured to go out after 3 days

**Professional Platform** – Turn on and set the frequency

#### How are email reminders different on the professional platform?

- Can create custom email reminders
- Example: Overdue card charges (they have transactions that need to be submitted)
- Can customize so reminder comes “from” the CFO

We have found that more than **\$7bn** in unclaimed cross-border VAT relating to T&E and AP is **lost every year** because...

“ Don't worry about VAT, it's too difficult. ”  
We do not have the staff for that.  
The rules of VAT always change.

## 7 Billion

in VAT refunds is left unclaimed by businesses each year. These refunds can sometimes amount to as much as 25% of total cost.

So why then is this revenue being left on the table?

The main reason is that the reclaim process is complex.

VAT charges differ from country to country as do the qualifications and the refund procedure itself.

Language barriers compound the issue, and often businesses decide it isn't worth the administrative burden.
