5 simple ways
SAP Concur makes life easier for IT.

SAP Concur

Travel, expense, and invoice systems should work *for* you, not vice-versa.

Taking travel, expense, and invoice management to the cloud should create value, not volatility. It should spark innovation, not frustration. And while doing more work for finance, procurement, and travel teams, it should solve IT problems, not create IT headaches.

But when you extend your SAP infrastructure to include SAP Concur solutions, you're investing in a travel and expense platform that's always growing, constantly creating, and continuously building breakthroughs you can count on.

Here are five ways to prove it.

1. SAP Concur
provides a data flow that takes care of itself.

SAP and SAP Concur native integration keeps data flowing between your travel, expense, and invoice processes and critical HR, procurement, and finance workflows. So everything from employee profiles and cost objects to company codes and payment/reimbursement information is always on the mark and up to date.

Finance gets:

- Accurate, near-real-time financial postings.

- An easier way to manage budgets, taxes, and payments.

You get:

- Secure, encrypted, fully automated data integration.

- Embedded monitoring and error handling.

2. SAP Concur offers single-sign-on simplicity and security.

Duplicate sign-ons frustrate users and create more system risks. SAP Concur eliminates the issue with a single-sign-on that slides right into your existing SAP systems.

Users get:

- A cleaner, more efficient experience.

- Seamless moves in and out of multiple SAP apps.

You get:

- More control over user management and authentication policy.

3. SAP Concur
feeds into the SAP one-inbox experience.

Nobody wants to chase their work across multiple screens and dashboards. So SAP Task Center adds SAP Concur to-dos to the existing inbox employees are already using. Their work is right there, in other words, and they can keep working.

Users can:

- Approve spend requests and expense reports alongside their other SAP tasks.
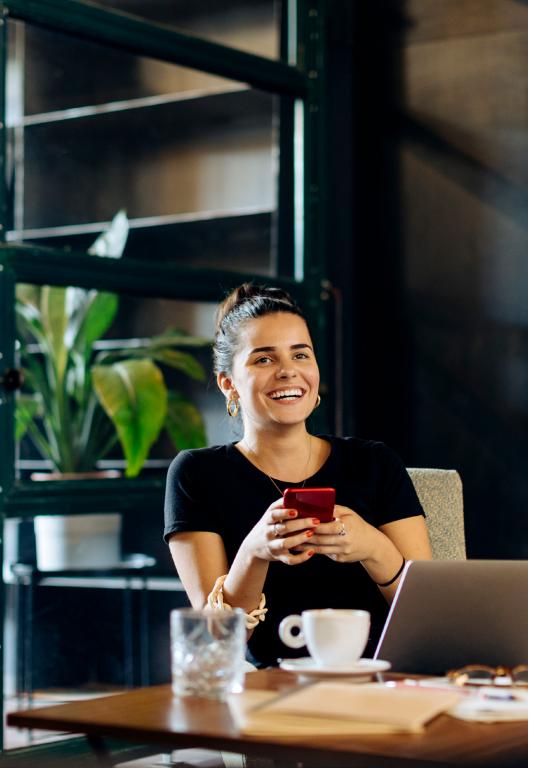

Finance can:

- Compress cycle times and close the books faster.

You can:

- Drive more engagement with the Task Center solution you already have – boosting user satisfaction.

4. SAP Concur is a shorter path to impactful AI.

Generative AI is a hot topic in virtually every boardroom and planning session in the world. SAP Concur is putting it to work — building on more than a decade of machine-learning momentum, and improving the accuracy, compliance, and speed of T&E processes.

- Pairing incredibly deep travel-spend data, policy information, and travel history with real-world points of reference pulled from generative AI.

- Building on and through the SAP Business Technology Platform (BTP) to deliver an increasingly simple, personalized, AI experience unrivaled in the industry.

- Providing sharper, deeper, in-the-moment insights to guide the strategy decisions finance and travel leaders have to make, as well as the daily decisions employees make in order to get their work done.

As a result, you'll be able to accelerate innovation across the company, while enhancing the value of the SAP investment you've already made.

5. SAP Concur means streamlined provisioning.

Keeping systems up to date as employees come and go creates a mound of manual work and a potential mountain of mistakes.

The upcoming SAP SuccessFactors and SAP Concur integration will reduce the work – and the risk – by using SAP Master Data integration to simplify user account setup and management.

That means:

- Permissions, rights, and access are always up to date for every user.

- Everything is easier, from user onboarding to finance re-orgs.

- Centralized distribution of master data objects boosts control and security while reducing redundant integration tasks.
