

Concur Travel

New Car rental booking experience

DEVELOPING THE TRAVEL PLATFORM OF THE FUTURE

At SAP® Concur®, we are evolving our online booking tool to better address the current and future needs of our travelers, customers, and travel partners, by leveraging new technology and adapting to changing market needs.

This next generation of Concur Travel will transform the business travel experience by developing the travel platform of the future across our entire travel solution ecosystem. It will support travel innovation and offer a completely new look and feel for a seamless end-to-end travel and expense booking experience.

Make your travelers happy while getting more visibility and control of your spend

Companies seek a variety of options within their corporate booking tool when booking car rental that are easy to schedule, sustainable, and within their organization's preferred policy. Travelers want to book car rental content on desktop and mobile, with the fare and ancillary richness they are used to when booking on a car rental website or with their TMC.

The evolution of car rental booking in Concur Travel will provide our customers enhanced visibility into bookings, providing a more accurate picture of their travel spend. Travelers will experience a user-friendly and intuitive user interface, desktop-mobile content parity and a rich content to help them make confident choices that are cost-effective, compliant, and sustainable.

Enjoy a new car rental booking experience

The new car rental booking experience within Concur® Travel meets the needs of travelers and travel managers alike by offering:

- **Improved user experience** with an intuitive workflow that accurately reflects costs and allows booking of special equipment.
- **Mobile-first experience** provides consistent content and design on both the desktop and mobile platforms.
- **Enriched content** allows all travel partner offerings to be displayed, which enables better visibility over booking criteria, costs, and policy compliance.

Core features

The first release of this new booking experience will include the following features:

- Upgraded GDS content - Amadeus
- Enhanced direct supplier content for Hertz and SIXT
- Content parity between web and mobile
- Vendor comparison at off-airport search
- Better imagery and descriptions
- Included services displayed
- Shorter shop to book experience
- Carbon emissions display and filter for electric vehicles
